Dear Sir,

We congratulate you for initiating this scientific communication.

Objective of research is to find 'truth'. As rightly quoted by the Greek philosopher Heraclitus "Change is the only constant in life" , our primary objective of research is document, analyse & interpret the applications in the interest of human life.

In the background of high incidence rate of Adverse drug reaction, higher expenses, limited safety of modern drugs , Indian Traditional Medicinal system is being accepted by global community as a Therapy. It is now responsibility of every scholar of Indian Traditional Medicine.

In India Ayurved, yog & Naturopathy, Siddha & homeopathy are recognised as Indian traditional medicinal Systems.

As Ayurved education is allowed in regional languages all scientific material is available in regional languages. This scientific knowledge is not being reached to the scientific community in world. As limited publications in English there is limitation for dissemination of scientific knowledge. Ultimately there are less number of citation & very low impact factor of this scientific Knowledge.

Researchers are not being recognized from global scientific community. This scarcity of scientific community in ITMS wrong interpretation by research outcomes of modern scientists has been being published.

Due to inadequate availability of quality journals students , teachers & scientists are deprived from recognition and process of decision making in public issues.

So there was a dire need of a periodic for Indian Traditional Medicine system which was fulfilled by this esteemed journal.

We hope this journal will initiate special section for the young budding scientist to publish their academic research work.

The International Journal of Education and Research in Health Sciences (IJERHS) a journal par excellence in the broad field of health sciences covering a wide spectrum of medical subjects. It is a very effective and truly academic platform for authors and researchers to get a wider distribution for their work.

I have reviewed the previous issues of the journal and have found that the content is exceptionally good which has been deftly selected and reviewed.

The journal provides a very elaborate and easy interface for the prospective authors to understand the steps to be followed to facilitate submission of articles. The review process and the time taken from submission to publication is at par with contemporary journals.

We again congratulate to the editorial team of this journal for providing a golden opportunity for publication to the fraternity Indian Traditional Medicine community.

I am happy that the Editors are constantly endeavouring to improve the journal. I sincerely wish them all the very best in their future endeavors.
